TRADING CAN FEEL SCARY

Two-Way Perpetuals

Try Long and Short BTC/USD on Solana, safely in demo mode.

Perpetual trading is hard for beginners. Profit, loss, and liquidation risk are difficult to picture.

- Long and Short ideas are new to many beginners
- Leverage can make losses grow fast
- It is hard to see how close you are to liquidation

02

How it works

A mobile-first app with three bottom tabs: Trade, Positions, and Swap. Jupiter, Changelly, and the wallet are mocks.

- Trade BTC/USD with USDC margin and up to 3x leverage
- Open an order in a bottom sheet: margin, leverage, Long or Short
- Positions show live PnL and a safety bar for liquidation distance
- Swap BTC, ETH, or SOL to USDC with a simple card showing rate and fee

03

Why it matters, what's next

You can learn how leverage and liquidation work with no real money at risk. The price simulator makes it easy.

- No real trades or funds are used in demo mode
- Price simulator buttons move the price by 3% or 10%
- Japanese and English, dark neon design, PC and phone
- Next: confirm the name and the demo starting settings
